Certainty in an Age of Uncertainty

Over most of 2016, the market climbed a “wall of worry”. The uncertainties were legion: ongoing questions about where oil prices would stabilize, continuing geopolitical issues, a surprise “leave” vote under Brexit and a stunning U.S. presidential election outcome where polarized Americans acknowledged their desire for change. Even Canada’s path to stronger economic growth remained in question. As we start a new year, there is no doubt that many uncertainties persist.

Amidst all of the uncertainty, some things are more certain. Central banks have created a peculiar world, where interest rates have been kept at low levels for many years to help stimulate economies. In some parts of the world, negative interest rates prevail. Closer to home, we are likely to see interest rates held at lower levels for the foreseeable future.

Low interest rates are a double-edged sword. While they are great for borrowers, they are quite a different story for income investors. Returns of one or two percent can be quite discouraging, especially since they may represent a negative return in terms of purchasing power after factoring in taxes or inflation.

As such, today’s reality is that the stock market has been, and continues to be, a better way to deliver a cash flow stream compared to alternatives like government bonds. One of the ways in which this can be achieved is through dividends. Many quality companies continue to have a history of paying or even boosting dividends through both good times and bad. In fact, a rising share of the total return from the equity markets has come from the dividend yield and dividend growth. This has been the case in Canada, where over the past 25 years the compounded annual return of the S&P/TSX Composite Index with dividends reinvested has been 8.6 percent and the total return yielded almost 1.8 times the return of the index alone (from 09/30/91 to 09/30/16). It should also be remembered that even during this time, there were various rough periods including two of three bear markets that saw the index drop by 45 percent. Investors shouldn’t overlook the impact of dividends and on page 3 we discuss some of the reasons to embrace dividend-paying equities.

As we look forward to the year ahead, despite the many uncertainties, we shouldn’t lose sight of the fact that Canada’s financial and economic systems continue to function well and remain the envy of many other countries of the world. Many hardships have challenged the Canadian financial markets over recent years, but we should maintain confidence knowing that our economy has remained relatively resilient. I wish you health, happiness and prosperity in 2017, and remain here to support you.

RSP Season is Here

Happy 60th Birthday, RSP! (Time to Take Action)

For 60 years, the registered Retirement Savings Plan (RSP) has become a valuable part of many investors' wealth and investment plans. As the annual deadline for contributions approaches, we encourage you to do a more detailed check-up on your plan. Here are some things that may be reviewed:

- **Beneficiary Designations** — Ensure that you have updated beneficiary(ies) designated in the plan documentation (in Quebec this designation must be made in your will or marriage contract). Understand that there may be tax consequences to your estate depending upon who has been named as beneficiary(ies). There may also be special considerations to address if designating a minor child (which vary depending on provincial or territorial laws), an individual with a disability (whether or not they are a beneficiary of a Registered Disability Savings Plan) or non-residents.
- **U.S. Estate Tax** — Currently, U.S. securities held within your RSP can have U.S. estate tax implications, even if you are not a U.S. citizen. Depending on your particular situation, you should consider whether it is advantageous to hold U.S. securities directly or instead, indirectly – either through a

holding company or through a Canadian mutual fund that invests in the U.S.

- **Spousal RSP** — There may be opportunities to split income through the use of a spousal or common-law partner (CLP) RSP. Remember that the total amount you can deduct for contributions you make to your RSP and your spouse/CLP's RSP cannot be more than your RSP deduction limit.

Please consult a professional tax advisor before acting on the above information; tax consequences vary with particular circumstances. **Reminder: The last day to make RSP contributions for the 2016 tax year is March 1, 2017. Please call for assistance with any RSP matters.**

Preparing Future Generations

Teaching Kids About Money

Having conversations with children or grandchildren about money has the potential to yield tremendous returns down the road. Just think about the head start that a young person could have with an "extra" \$500,000 nest egg in retirement. That's what would result by the age of 65 if a TFSA was started at 18, by contributing \$5,500 for only 12 years at a compounded annual return of 5 percent.

It Starts with Saving!

Some of the most financially successful people are able to consistently put aside a regular part of their income for the future. Children should learn that we are always balancing what makes us happy now and what will make us happy later, and that saving is one way to fulfill our future needs. Giving children the chance to work toward a goal can help teach the concept of saving. Older children can be taught that compounded interest can help to reach a goal more quickly.

It's not just the value of saving and compounded growth that are important lessons. Teaching children other financial skills can be beneficial, and experts say that conversations can start at any age:

Managing Money — Providing kids with an allowance may be one way to teach kids how to manage money through a discretionary income. It can teach that there is never enough money to buy everything we want and that we often need to prioritize our needs. For older children, an allowance can

provide learning opportunities such as keeping track of money, understanding the cost of goods or budgeting.

Delayed Gratification — Our world has become "on demand", driven by influences like on-demand television and one-click internet shopping. This has challenged the concept of delayed gratification. But learning how to delay gratification can be an important skill. The Stanford marshmallow experiment was a series of studies in which a child was offered a choice between eating one marshmallow immediately or two marshmallows after waiting a short period of time. Children who were able to wait longer tended to have better life outcomes.¹

Financial Education in a Changing World

As technology continues to play an increasing role in our lives, financial education should also include internet safety. Children should be taught the dangers of revealing personal information over the internet. Even the most innocent social media sites can broadcast personal data that can be used by unscrupulous individuals. Broadcasting family wealth can also have unintended consequences. Teaching how to filter false information can also help to protect against hoaxes.

In short, a little bit of financial education can go a long way. As the saying goes: "mighty oaks from little acorns grow".

Maintaining Confidence

The Value of Dividend-Paying Equities

The long-term case for dividend-paying equities continues to be compelling. Here are some reasons to have confidence in the value of dividends within your wealth management strategy:

An integral component of long-term returns. Dividend-paying companies represent a significant part of long-term returns within the equity market. Over a period of 25 years from 1991 to 2016, the compounding effect of dividends on the S&P/TSX Composite Index has been profound – with reinvested dividends providing around 45 percent of total returns. On this basis, an investment of \$1,000 would have yielded around \$4,350 today on the index alone but around \$7,800 if dividends were reinvested.¹

May provide a reliable and steady cash flow stream that can be used for income, or reinvested. Today's persistently low interest rates and slower growth have made it challenging for investors to find income-generating investments. Dividend-paying equities continue to provide a steady stream of income to an investor. Many quality companies will consistently pay dividends year after year because it is seen as a sign of economic health (i.e., there is excess cash with which to pay shareholders).

Historically have provided greater protection in bear markets. The dividend yield of a stock can provide a degree of downside protection. The dividend yield reduces the potential impact of a decline in share price during economic downturns. Studies have also shown that dividend-paying stocks have proved to be a useful buffer when investors

experience high degrees of volatility.²

A tax-efficient means of investing. Remember that not all income sources are treated equally by the tax authorities. Canadian dividends are potentially one of the lowest-taxed sources of investment income in Canada, when compared to interest income or foreign income. This is due to the non-refundable tax credit applicable to most "eligible dividends", generally dividends issued by Canadian public companies. Consider that for each dollar of dividend income received, an Ontario resident taxed at the highest marginal tax rate would keep about 14 cents more compared to a dollar of fully taxable income (based on an assumed 53.53 percent marginal tax rate and a 39.34 percent effective tax rate for eligible dividends).

The potential for dividend growth. Don't overlook the potential impact of dividend growth. The S&P/TSX Composite Index dividend has had an annualized growth rate of 5.2 percent over the past 25 years.³ And, consider the extreme case of Johnson and Johnson, a company that has increased its dividend payout for 54 consecutive years. Shares of Johnson and Johnson purchased in 1972 (and held) would have had dividend returns of approximately 3,300 percent today!⁴

In short, we continue to advocate the benefits of quality dividend-paying stocks as part of your wealth and investment plan.

Using same 25-year data. Index dividend = Index Total Return – Index Price Return; 4. Based on JNJ dividend factor to August 2016, provided on corporate website: investor.jnj.com

In Brief: Housing Market Changes

More changes are on the way relating to Canada's housing market. Here are some of the more important changes, in brief:

Selling your home? New reporting rules apply. As of the 2016 taxation year, you will now be required to report the sale of your home to the Canada Revenue Agency on **Schedule 3, Capital Gains** of the T1 Income Tax and Benefit Return. Previously, taxpayers were not required to report the sale of a home if it was their principal residence for each year of ownership. Penalties will apply if the sale of the home is not reported.

Only certain trusts will be able to designate property as a principal residence. Previously, various types of personal trusts were entitled to claim the Principal Residence Exemption (PRE). New rules impose additional requirements on trusts holding a principal residence and limit the PRE to the following general types of trusts: alter ego, spousal or common-law partner, joint spousal/partner, qualified disability trusts and trusts for minor children of a deceased parent, effectively limiting the beneficiary

of the trust to family members of the person creating the trust.

A mortgage rate stress test will apply to all insured mortgages. All low- and high-ratio insured homebuyers must qualify for mortgage insurance at an interest rate that is the greater of their contract mortgage rate or the Bank of Canada's conventional five-year fixed rate. Other stress test rules also apply.

For more information, please see the Department of Finance website: www.fin.gc.ca/n16/data/16-117_2-eng.asp

Note: At the time of writing, some changes have not received Royal Assent.

Business Owners: Corporate Resolutions

With the dawn of a new year, why not consider taking a closer look at your business for potential corporate tax-planning opportunities and strategies? Here are some ideas:

Salary for Family Members — If you have family members who are currently in a low tax bracket or who have tax credits/deductions available for use (e.g., tuition tax credits), consider paying them a reasonable salary for services provided to the business. This has the potential to take advantage of their lower marginal tax rate, build up their registered Retirement Savings Plan (RSP) contribution room and generate pensionable (Canada/Quebec Pension Plan (CPP/QPP)) earnings.

RSP Contributions — Consider having the corporation make your RSP contributions directly. This will eliminate the need to withhold income taxes at source on the amounts contributed (although CPP must still be deducted and remitted), thereby improving cash flow.

Estate Freeze — If you are the sole shareholder of the company, consider introducing your spouse and/or children, either directly or indirectly (by way of a trust), as shareholders of the corporation. Under this arrangement, you will be able to split income through the distribution of dividends and potentially multiply the capital gains exemption. Unlike salaries, dividends paid to family members are not subject to payroll tax withholdings and the amount paid will not be subject to a “reasonableness” test.

Salary vs. Dividends — With your professional advisor, consider revisiting your remuneration strategy. Why? The right mix of salary and dividends can minimize the combined amount of corporate and personal taxes to be paid and ensure that you are obtaining the maximum tax deferral available, while still meeting your cash flow needs.

Shareholder’s Agreement — If you are not the sole shareholder of your business, you should ensure that

an enforceable shareholder’s agreement is in place. It is important to review this binding agreement periodically to make certain that all parties are adhering to the terms of the agreement and determine if changes or updates to the agreement need to be made.

Individual Pension Plan (IPP) — The corporation could establish a defined-benefit pension plan for an individual which may provide a better tax-sheltered retirement vehicle when compared to an RSP. Generally, higher contributions are possible to an IPP than to an RSP. Contributions to the IPP are deductible when computing the corporation’s taxable income and assets in the plan grow on a tax-deferred basis until distributed to the plan’s beneficiary.

Life Insurance — Corporate-owned life insurance has the potential to provide liquidity at the time of your death. These funds can be used as an income-replacement tool for surviving financially-dependent family members and may provide the funds necessary to pay your terminal tax liabilities.

As always, we recommend seeking the advice of a professional tax advisor who has a background in business planning as you consider any of these opportunities. Wishing you a prosperous year ahead for your business!

With the Compliments of:
